

Zulfiya Yumagulova

Full Stack Developer

PROFILE

Full-time bootcamp | November 2021 - March 2022

Chosen from 2000+ applicants to undertake a 16-week intensive full-time coding. During my time training at the School of Code, I learned the principles of software development, how to apply algorithmic thinking and agile principles in the collaborative development of solutions, and the importance of design thinking, comprehensive testing and user experience when developing software. I initially learned HTML, CSS and JavaScript, and then moved on to developing with libraries and frameworks such as React.js, Three.js, Node.js, Express.js, working with databases such as Postgresql and implementing unit tests, integration tests (Jest, React-testing-library) and end-to-end tests (Cypress).

Experience

Export Administrator May 2021 - March 2022, London

London, United Kingdom

Dealing with export freight operations and customs clearances.

Speaking to customers on a daily basis.

Administration including updating files, documents and invoices

Hairdresser June 2015 - March 2021, London

Build at least of 136 regular clients.

Flexible and able to work any shift pattern.

Cut and color hair.

Projects

One week project

A platform where user can keep all needed links. Full stack project using Node.js, Express, Postgresql, React, Cors. I was involved in work with front end. My team has been working on creating React components, add functionality in front end and style it.

Final Project

Our plan and working process followed AGILE methodologies. We planned out our initial MVP and kept revisiting this as the project went on. Settings tripwires and having regular code reviews we kept on track. I put myself forward to work extra hours, and made sure I always was available to help other team members if they needed it. In that project I worked in back end using Node.js, created RESTfull API, Postgresql Data Base, Auth0.
